

“ We didn't use any kind of CMMS before this. Now, I can't imagine managing our properties without it. You can build out HelixIntel with functionalities that work best for you. ”

- Mary D., Operations Director

Customer Highlight

How HelixIntel is Transforming Property Maintenance

Real Customers, Real Results

For many organizations, managing maintenance without a centralized system leads to overwhelmed teams, missed updates, and critical information scattered across multiple locations. Before HelixIntel, Rachel, a Stable Housing Director overseeing 57 housing properties, had no reliable way to quickly access key documentation after a fire. At another organization, Mary, an Operations Director managing 10 properties, relied on a maintenance coordinator who struggled to track work requests and timelines across sites. After adopting HelixIntel, both organizations transformed how maintenance is managed, gaining clearer visibility, faster response times, and greater confidence in day-to-day operations.

01.

Work Order Management

Work orders are now submitted and received in real time, enabling teams to respond quickly and efficiently whether they're on-site or out in the field.

02.

Centralized Communication

Communication across departments has improved, with everyone accessing up-to-date information through a single, easy-to-use platform.

03.

Real-World Tools

All documentation and maintenance data are stored in one place, giving teams the ability to act quickly and accurately without missing critical information.

Join HelixIntel

HelixIntel goes beyond traditional CMMS tools. It helps teams **stay organized, reduce stress, and communicate more effectively** through a single, easy-to-use platform built for real-world property maintenance.
